NISSEN

A Nissen is a surgical procedure performed by suturing the fundus of the stomach around the esophagus to prevent regurgitation from the stomach. In some cases a flap is devised similar to a trap door. It will open into the stomach, but it will not open in the other direction. It usually will not allow the student to throw up or belch.

1. Student history
   A. Student had procedure performed at (age)
2. Staff interventions
   A. If 911 is called for any reason, make sure the paramedics understand that student has a nissen. Vomiting should not be induced.
   B. Contact parent immediately if student vomits.
   C. Contact parent with any question or concerns related to student's nissen procedure

AUTHORIZATION / INFORMED CONSENT / MEDICAL RELEASE

I have reviewed and am in agreement with the Health Care Plan and I authorize school officials to provide my child with health care services in accordance with this plan. I understand that my student's health information will need to be shared:

To benefit the student in terms of health maintainance and academic progress

When necessary to accommodate the safety and well being of student and staff

With the discretion of the school nurse to determine what is shared and who should know.

I understand that consent for sharing of health information will remain in effect as long as my student is enrolled in Davis School District and may be revoked at any time in writing by parent / guardian.

I understand if clarification of the health information is needed, my signature authorizes the school nurse to contact the medical provider and authorizes the medical provider to release information.
